AI Privacy Notice

SPERT® Suite Web Applications

Version 2.3 · Effective Date: October 26, 2026

Operator: famousdavis, LLC (a Florida limited liability company)

This AI Privacy Notice supplements the SPERT® Suite Privacy Policy and describes what happens to your data when you choose to use the optional AI Connectivity feature ("Connect AI") available in SPERT® Suite web applications. If you do not use the Connect AI feature, this Notice does not apply to you, and your use of the Apps is governed solely by the existing Privacy Policy.

This Notice applies to every SPERT® Suite application that offers Connect AI. Individual applications implement the feature differently — in some, an AI assistant can create and modify your content; in others it can only read. Section 2 describes the modes in general terms, and Section 2.3 identifies which modes each application currently offers.

Change of Operator. Effective September 12, 2026, the SPERT® Suite business was transferred from the sole proprietorship of William W. Davis, MSPM, PMP to famousdavis, LLC, a Florida limited liability company, which is now the Operator of the SPERT® Suite applications. This is a change of legal entity only: the AI Connectivity data flows, retention periods, service providers, and controls described in this Notice are unchanged by it, and no new consent is required on account of it. References to the "Operator" in prior versions of this Notice are to be read as references to famousdavis, LLC as of that date.

1. What Is AI Connectivity?

AI Connectivity is an optional feature that allows an external AI assistant of your choosing — such as Claude by Anthropic, ChatGPT by OpenAI, Microsoft Copilot, Google Gemini, Grok, or similar tools — to interact with your SPERT® Suite application. Depending on the application and on the permissions you grant, your AI assistant may be able to create and modify content in the app, read the content you have already created, or both.

AI Connectivity is entirely opt-in. It is not enabled when you open the Apps, and it can be disconnected at any time. Your AI assistant can only interact with the SPERT® app after you have explicitly initiated the connection and provided your session code to your AI assistant.

Your consent is recorded separately in each application. Consenting in one SPERT® app does not enable Connect AI in another. You will be asked again the first time you use the feature in each application, and again in each browser or on each device you use.

2. Modes of AI Connectivity

Connect AI is described in terms of two modes. **Not every application offers both.** Where an application offers both, you are asked about them separately. Where an application offers only Read Mode, that application is read-only by design: no permission you grant will allow an AI assistant to modify your content there, because the capability does not exist.

2.1 Write Mode (AI Writes Into Your App)

When Write Mode is enabled, your AI assistant can create and modify content within the SPERT® application you have open — the items, structure, estimates, schedules, notes, or metadata that the particular application is designed to manage. In applications that offer Write Mode, it is required in order to use Connect AI at all.

How your data is handled in Write Mode:

- AI-generated content is routed through SPERT®'s secure cloud relay (Google Firestore, operated by Google LLC) as a transit channel to reach your browser.
- Your existing project data remains in your browser's local storage and is not uploaded to any server.
- The content transmitted through the relay is automatically deleted from Google Firestore after your session ends or seven (7) days after the session's last activity (including requests from your AI assistant), whichever comes first, and is not kept in the live relay beyond that (automated deletion of expired data typically completes within 24 hours). Copies may remain in the Operator's database backups until they expire (see Section 2.2).
- The AI-generated content itself is also processed by your chosen AI provider as part of normal AI operation. That provider's own data policy governs how they handle it.

The "your data never leaves your browser" promise that applies to local-only use remains accurate for your existing project data in Write Mode. Only AI-generated content transits the relay.

2.2 Read Mode (AI Reads Your Existing Content)

When Read Mode is enabled, your AI assistant can read content you have already created in the SPERT® application you have open, so that it can reference, explain, or build upon that content. What that content consists of depends on the application — a structure you have mapped out, a schedule you have built, a forecast you have run.

How your data is handled in Read Mode:

- A snapshot of your current project content is uploaded from your browser to the SPERT® cloud relay (Google Firestore) so that your AI assistant can access it.
- **Only the project you have open is shared** — never your entire workspace. Switching projects replaces the shared snapshot rather than adding to it.
- This snapshot is transmitted to your chosen AI provider's servers as part of the tool call. Your AI provider's data retention and usage policies apply to this content.
- The snapshot is deleted from the live relay when you disconnect, when you turn Read Mode off, when you sign out, or when the session expires seven (7) days after its last activity, including requests from your AI assistant (automated deletion of expired data typically completes within 24 hours). Because the relay shares a database with Cloud Storage data, copies may remain in the Operator's database backups until they expire: up to 98 days for daily backups and up to 7 days for point-in-time recovery data. Backups are used only to recover the Services, are not shared with your AI provider, and are not deleted by disconnecting.
- The snapshot can be read only by SPERT®'s relay server; it cannot be read from web browsers.

- SPERT® does not permanently store your project content. Your AI provider may retain it in accordance with their own policies.

Read Mode uploads a copy of your open project regardless of your storage setting. If you have configured an application to keep your data in local storage only, enabling Read Mode nevertheless results in a copy of the open project being uploaded to the relay, because that copy is the means by which your AI assistant reads it. Turning Read Mode off, or disconnecting, deletes it.

Read Mode changes the data handling promise for the content you choose to share. Your project data is no longer local-only for the duration of the AI session. You should evaluate whether Read Mode is appropriate based on the sensitivity of your content and your AI provider's data policies before enabling it.

2.3 Modes Offered by Each Application

As of the effective date of this Notice, the applications offering Connect AI, and the modes each offers, are:

Application	Write Mode	Read Mode
SPERT® Story Map	Offered; required to use Connect AI	Offered; optional
SPERT® Scheduler	Offered; required to use Connect AI	Offered; optional
SPERT® Forecaster	Not offered — the connection is read-only	Offered; the only permission requested

Applications may be added to this list, and the modes an application offers may change. This table will be updated accordingly; the remainder of this Notice applies to every application offering Connect AI, whichever modes it provides.

3. Your AI Provider's Data Policy

SPERT® does not control how your chosen AI provider handles content it receives. Different AI providers have different policies on data retention, training use, and organizational data boundaries:

- **Microsoft Copilot (organizational accounts):** Content processed through Microsoft Copilot for organizations enrolled in Microsoft's commercial data protection program is handled within your organization's Microsoft 365 tenant and is not used to train Microsoft's foundational AI models. Verify your organization's Microsoft agreement for details.
- **Claude by Anthropic:** Anthropic's data handling practices for API-accessed content vary by account type. Refer to Anthropic's privacy policy and usage policies at anthropic.com/legal for details.
- **ChatGPT by OpenAI:** OpenAI's data handling practices vary by account type (free, Plus, Team, Enterprise). Refer to OpenAI's privacy policy at openai.com/policies/privacy-policy for details.
- **Other AI providers:** Refer to your provider's applicable privacy and data policies.

We recommend that users handling sensitive, proprietary, or organizationally regulated content review their AI provider's policies before enabling Read Mode, and confirm with their organization's IT or information security team that the chosen AI provider is approved for use with that content.

4. What Data SPERT® Holds During an AI Session

During an active AI session, the SPERT® cloud relay (Google Firestore) temporarily holds:

- A session identifier (a randomly generated code with no connection to your name, email, or account).

- AI-generated content in transit to your browser, in applications that offer Write Mode.
- A snapshot of your project content, if Read Mode is enabled.
- Session activity timestamps used to manage session expiry.

SPERT® does not associate this session data with your name, email address, or any personal account unless you are signed in with a SPERT® cloud account. Anonymous session data is held under a random identifier only.

Relay session data expires seven (7) days after the session's last activity, including requests from your AI assistant, and is then deleted from the live relay by an automated process, typically within 24 hours of expiry; it is deleted sooner when you disconnect or sign out (see Section 6 if the relay server cannot be reached). Copies may remain in the Operator's database backups until they expire (see Section 2.2).

5. Infrastructure

SPERT®'s cloud relay is hosted on Google Firestore, a service operated by Google LLC on Google Cloud infrastructure. Google processes this data on behalf of the Operator as a service provider. The relay is hosted in the United States: session data is stored in Google Firestore (multi-region nam5), and the relay's server component runs on Google Cloud Functions in us-central1. Operational logs are described in Section 2.3 of the Privacy Policy. For information about Google's data practices, see:

- https://firebase.google.com/support/privacy
- https://policies.google.com/privacy

6. Your Choices and Controls

- **Connect AI is opt-in.** If you do not use it, your data handling is unchanged from the standard Privacy Policy.
- **Where an application offers both modes,** Write Mode is required to use Connect AI and Read Mode is optional. You may connect with Write Mode alone and leave Read Mode disabled.
- **Where an application is read-only,** Read Mode is the only permission you are asked for, and declining it means your AI assistant can discuss the application in general terms but cannot see your content.
- **You may enable or disable Read Mode at any time** from the Connect AI panel within the application. Disabling it deletes the uploaded snapshot from the live relay immediately and leaves the rest of the session intact.
- **You may disconnect at any time.** Disconnecting immediately ends the AI session, prevents any further interaction between your AI assistant and the application, and causes the session relay data — including any snapshot — to be deleted from the live relay.
- **Signing out has the same effect** as disconnecting, in applications where you are signed in to a SPERT® cloud account.
- **If SPERT®'s relay server cannot be reached** when you turn Read Mode off, disconnect, or sign out (for example, because you are offline), the data concerned stays in the live relay until a later attempt to delete it succeeds or the session expires seven (7) days after its last activity (including requests from your AI assistant); if this happens when you sign out, the application tells you and retries automatically.

- **Consent is recorded per application, per browser.** Reviewing or changing what you agreed to is described in the AI Connectivity Consent Notice.

7. Organizational Users

If you use SPERT® on behalf of an employer or organization, you are responsible for ensuring that your use of AI Connectivity — including your choice of AI provider — complies with your organization's information security, data governance, and IT acceptable-use policies. The Operator assumes no liability for your failure to obtain required organizational approvals before enabling AI Connectivity or Read Mode.

Organizations wishing to evaluate AI Connectivity for policy compliance purposes may contact the Operator at contact@spertsuite.com. A summary of data flows for IT review purposes is available upon request.

8. Relationship to the Main Privacy Policy

This AI Privacy Notice is a supplement to, not a replacement of, the SPERT® Suite Privacy Policy. All terms, rights, and obligations described in the main Privacy Policy continue to apply. In the event of any conflict between this Notice and the main Privacy Policy with respect to AI Connectivity, this Notice governs.

9. Where to Find These Notices

This Notice and the companion AI Connectivity Consent Notice are published at:

- AI Privacy Notice — https://spertsuite.com/ai-privacy
- AI Connectivity Consent Notice — https://spertsuite.com/ai-consent-notice

The AI Privacy Notice is also linked from the consent dialog shown before any AI session begins, so that it is available to you at the moment you decide.

10. Changes to This Notice

We may update this AI Privacy Notice as AI Connectivity features evolve and as further SPERT® Suite applications adopt them. Material changes will be communicated by posting the updated Notice within the Apps and updating the version and effective date above. Your continued use of AI Connectivity after the updated effective date constitutes your acceptance of the revised Notice.

11. Contact Us

If you have questions about AI Connectivity or this Notice, contact:

famousdavis, LLC

Attn: William W. Davis, MSPM, PMP

Email: privacy@spertsuite.com

Mailing Address: 5000 NW 5th Ave., Boca Raton, FL 33431

Email sent to SPERT® Suite addresses at spertsuite.com is received and stored by Microsoft's Exchange Online mailbox service, as described in Section 2.7 of the Privacy Policy.
