

AI Connectivity Consent Notice

SPERT® Suite Web Applications

Effective Date: June 12, 2026
Operator: William W. Davis, MSPM, PMP

This document records the exact text presented to users in the AI Connectivity consent modal within SPERT® Suite web applications. It serves as the Operator's authoritative reference for the consent language users see and agree to before the Connect AI feature is activated. The consent modal appears once, the first time a user clicks "Connect AI" in any SPERT® Suite application.

1. Modal Title and Introduction

The following text appears as the header and introduction of the consent modal:

Connect AI to SPERT® [Application Name]

Your AI assistant can interact with this app in two ways. Choose what you're comfortable with, then click Connect AI.

Write Mode is required to use AI with SPERT®. Read Mode is optional.

2. Write Mode Consent Block

The following text appears in the Write Mode section of the consent modal, accompanied by a pre-checked checkbox that cannot be unchecked (Write Mode is required for AI Connectivity):

☒ **Allow AI to write to this app (required)**

AI-generated content will transit SPERT®'s secure cloud relay (Google Firestore, auto-deleted after your session) to reach your browser. Your existing project data stays in your browser and is not uploaded. AI-generated content is also processed by your chosen AI provider under their data policy.

3. Read Mode Consent Block

The following text appears in the Read Mode section of the consent modal, accompanied by an unchecked checkbox that the user may optionally check:

☐ **Allow AI to read my existing content (optional)**

Your existing story map content will be shared with your AI assistant, allowing it to reference

and build on what you've already created. This content will be uploaded to SPERT®'s cloud relay and transmitted to your AI provider's servers.

Your AI provider's data policy governs how they handle this content. If you are using an organizational AI tool (such as Microsoft Copilot through your employer), confirm with your IT or security team that sharing project content with it is permitted.

4. Footer Links and Action Buttons

The following text and controls appear at the bottom of the consent modal:

By clicking Connect AI, you acknowledge that you have read and understood the [AI Privacy Notice](#) and consent to the data handling described above.

[**Connect AI**] [**Cancel**]

5. Consent Storage and Re-Presentation Rules

The following rules govern how and when the consent modal is presented to users:

- The consent modal is displayed once, the first time a user clicks "Connect AI" in any SPERT® Suite application within a given browser.
- Upon clicking "Connect AI," the user's consent choices (Write Mode: true; Read Mode: true or false) are recorded in the browser's local storage under the key `spert_ai_consent` with a version identifier and timestamp.
- On subsequent sessions in the same browser, the consent modal is not re-displayed. The previously recorded consent choices are applied automatically.
- If the consent schema version changes (indicating a material update to AI Connectivity data handling), the consent modal is re-displayed regardless of prior consent.
- The user may review and change their consent choices at any time from the Connect AI panel within the app by clicking "Change Permissions." Doing so re-presents the consent modal.
- The user may revoke consent entirely by clicking "Disconnect" in the Connect AI panel. Disconnecting clears the active AI session and removes session data from the cloud relay. It does not delete the locally stored consent record; the user will be re-presented with the modal on the next "Connect AI" click.
- Consent is browser-local and device-local. It is not synced to a SPERT® cloud account. A user accessing SPERT® on a different browser or device will be presented with the consent modal on first use of Connect AI in that browser.

6. Application of App Name in Modal Title

The modal title references the specific SPERT® application in which the user is connecting their AI. The title format is:

Connect AI to SPERT® [Application Name]

The bracketed application name is replaced with the name of the specific app in which the user clicks “Connect AI” (e.g., “SPERT® Story Map,” “SPERT® Scheduler,” “MyScrumBudget™”). The consent text is otherwise identical across all SPERT® Suite applications.

7. Contact
